## EDUCATION

**Western University** June 2026

*Bachelor of Science Specialization in Computer Science* *London, ON*

- **Relevant Coursework:** Data Structures and Algorithms, Databases, Object-Oriented Design and Analysis, Internet Algorithmics, Software Architecture, Parallel and Distributed Computing, Software Project Management

## TECHNICAL SKILLS

**Languages:** Python, Java, TypeScript, JavaScript, HTML, CSS, SQL
**Frameworks:** React, Next.js, Node.js, Express, Django
**Infrastructure:** PostgreSQL, MongoDB, Redis, AWS (EC2, S3, RDS, Lambda), Docker, Git

## EXPERIENCE

**Software Engineer Intern** Remote

*Constant Closer* *March 2025 – August 2025*

- Reduced daily Slack support tickets by over **95% (from 30+ to less than 2 per day)** by developing a self-serve dashboard with a guided campaign-creation wizard in **Django** and **Bootstrap**, enabling users to launch campaigns without support.
- Designed and implemented internal system features including team management, role-based access control, and invitation workflows with REST APIs and relational database models, supporting **50+ active users** managing dozens of teams.
- Optimized internal system performance by improving PostgreSQL indexing, introducing Redis caching, and implementing cursor-based pagination, reducing activity-feed load times by **98%** (from several seconds to under 100 ms).
- Built a CSV upload and validation pipeline using **JavaScript**, **AWS Lambda**, and **S3** to process email lists with **100k+** records reliably.

**Software Engineer Intern** Remote

*HitMeUp.ai* *May 2024 – August 2024*

- Increased client lead conversions by **10%**, measured through **Amplitude**, by building a sandboxed, responsive iframe chat widget that dynamically injected personalized **HTML** from **Django templates** into third-party websites.
- Eliminated manual data entry for internal metadata collection by building a **Python** scraper with BeautifulSoup, improving data accuracy and freeing up team bandwidth for higher-value work.
- Built the user-facing mobile dashboard in React Native, implementing onboarding and account management workflows that enabled the product's **first cohort of paying customers**.

## PROJECTS

**Northstar Countertops** | *Next.js, TypeScript, TailwindCSS, Google App Scripts, Vercel* November 2025 – Present

- Designed, developed, and deployed a responsive business website using Next.js and Tailwind CSS, generating 3**0+ high-ticket customer leads** through online inquiry forms.
- Automated lead management using Google Apps Script to capture form submissions in Google Sheets and send email notifications to the business owner, eliminating manual lead forwarding.

**Hair Salon Queue Manager** | *Next.js, TypeScript, TailwindCSS, Vercel* January 2026

- Designed, deployed, and maintain a queue management system used in production by a real hair salon, built on **Next.js**, **Prisma**, and **PostgreSQL**, with secure admin access, a customer-facing kiosk mode, and serverless APIs on **Vercel**.
- Architected a domain-driven queue engine with explicit rules, preventing invalid operations, resulting in zero reported data consistency issues across concurrent real-world usage.

**AlphaBack** | *AWS, Python, React* September 2025 – December 2025

- Built a cloud-based backtesting platform that allows users to upload custom **Java** trading models and evaluate them against historical market data, enabling centralized management and comparison of model artifacts.
- Designed a centralized model registry using serverless REST APIs **(API Gateway, Lambda)** backed by **Amazon S3 and DynamoDB**, enabling **3+** backend services to integrate with a unified pipeline supporting dozens of trading models.
