SUMMARY

Full-stack software engineer with 10 months experience at fast-paced, early-stage startups, shipping production features, and owning systems end-to-end. Specialized in backend systems, cloud infrastructure, and performance optimization, with a track record of delivering measurable improvements in production environments.

EDUCATION

Bachelor of Science Specialization in Computer Science

Western University • London, ON • 2026

- Relevant Coursework: Data Structures and Algorithms, Databases, Object-Oriented Design and Analysis, Internet Algorithmics, Software Architecture, Parallel and Distributed Computing, Software Project Management.

SKILLS

Languages: Python, Java, TypeScript, JavaScript, HTML, CSS, SQL

Technologies: React, Next.js, Node.js, Express, Django, PostgreSQL, MongoDB, Redis, AWS, Docker, Git

EXPERIENCE

Software Engineer Intern

Constant Closer

March 2025 – August 2025, Remote

- Reduced daily Slack support tickets by over **95% (from 30+ to less than 2 per day)** by developing a self-serve dashboard with a guided campaign-creation wizard in Django and Bootstrap, enabling users to launch campaigns without support.
- Designed and implemented internal system features including team management, role-based access control, and invitation workflows with REST APIs and relational database models, supporting **50+ active users managing dozens of teams**.
- Optimized internal system performance by improving PostgreSQL indexing, introducing Redis caching, and implementing cursor-based pagination, **reducing activity-feed load times by 98%** (from several seconds to under 100 ms).
- Built a CSV upload and validation pipeline using JavaScript, AWS Lambda, and S3 to **process email lists with 100k+ records reliably**.

Software Engineer Intern

HitMeUp.ai

May 2024 – August 2024, Remote

- Increased client lead conversions by **10%**, measured through Amplitude, by building a sandboxed, responsive iframe chat widget that dynamically injected personalized HTML from Django templates into third-party websites.
- Eliminated manual data entry for internal metadata collection by building a Python scraper with BeautifulSoup, improving data accuracy.
- Built the user-facing mobile dashboard in React Native, implementing onboarding and account management workflows that enabled the product's **first cohort of paying customers**.

PROJECT

Hair Salon Queue Manager

Chanal Hair Salon • January 2026 – February 2026

- Designed, deployed, and maintain a queue management system used in production by a **real hair salon**, built on Next.js, Prisma, and PostgreSQL, with secure admin access, a customer-facing kiosk mode, and serverless APIs on Vercel.
- Architected a domain-driven queue engine with explicit rules, preventing invalid operations, resulting in zero reported data consistency issues across concurrent real-world usage.
- Implemented a customer-facing kiosk mode with a self-serve ticketing system, **eliminating manual queue management** and allowing them to focus on their work.

AlphaBack

Western University • September 2025 – December 2025

- Built a cloud-based backtesting platform that allows users to upload custom Java trading models and evaluate them against historical market data, enabling centralized management and comparison of model artifacts.
- Designed a centralized model registry using serverless REST APIs (API Gateway, Lambda) backed by Amazon S3 and DynamoDB, enabling **3+ backend services** to integrate with a unified pipeline supporting **dozens of trading models**.

Eleet - LeetCode Discord Bot

- Built a Discord bot using Node.js, TypeScript, and MongoDB that automatically schedules and distributes daily coding challenges with timezone-aware dispatch and a no-repeat rotation algorithm.
